3M Purification Inc.

3M[™] High Flow Series Filter Systems

3M[™] High Flow Series Filter System

The 3MTM High Flow series filter system is an advanced design that uses 3M innovation and 3M Purification Inc.'s extensive filtration experience to deliver a high flow filter in a compact housing design. When compared to conventional cartridge systems, this system provides the following advantages:

High Flow Capability

The construction of 3M High Flow series filter systems permits flow rates of up to 500 gpm in a single cartridge. The result? Fewer filter elements to accommodate your flow requirements. In fact, the 3M High Flow series filter systems requires as few as one-tenth the number of elements as competitive 2.5" pleated cartridges (see Figure 1).

Compact Design

Using fewer elements combined with an outside-to-in flow path enables a reduction in the size of housing required for your application. The 3MTM High Flow series filter housing takes up as little as one-half the size of competitive housings for a given flow rate. The result is lower capital investment costs and a compact footprint that saves valuable plant space (see Figure 1).

Ease of Use

The 3MTM High Flow series filter system is designed with ease-of-use in mind. From a user-friendly, ergonomically designed handle that makes cartridge installation and removal easier without the use of special tools or other hardware, to a "twist-to-lock" cartridge seating mechanism that provides a positive seal, the 3M High Flow series filter system facilitates easy operation and maintenance of your filter system.polyimide. Maximizing surface area reduces recirculation time, while increased contact time improves filtration efficiency.

Features & Benefits

High flow capability of up to 500 gpm per cartridge

 Reduced Filter Usage — minimizes product loss, labor, disposal costs, operator exposure, and downtime for filter change-out.

Compound Radial Pleat design

■ High loading capacity for long life and lower cost filtration.

Compact design

- Smaller housing minimizes capital expense requirements.
- Reduces system footprint.

Absolute rating

■ Reproducible effluent quality throughout the filter's life.

Easy to Use

- No special tools or hardware required for filter change-out minimizes downtime.
- "Twist to lock" seating mechanism provides positive seal.
- Ergonomically designed handle facilitates easy cartridge installation and removal.

FDA compliant

 Compatible in applications requiring direct food contact in food and beverage processing per 21 CFR.

Applications

Industrial	Municipal Water, RO Prefiltration, Reclaimed Water, Coolants, Nozzle Protection, Boiler Condensate
Chemical	Quench Water, Aqueous Salt Solutions, Final Products
Petrochemicals	Waterflooding, Produced Water, Enhanced Oil Recovery, Completion Fluids, Amine Sweetening, Final Products
Electronics	RO Prefiltration, Process Water
Food & Beverage	Process Water
Pharmaceutical	Process Water

3MTM High Flow Series Filter System

3M[™] High Flow Series Filter System

High Performance Media in an Innovative Design

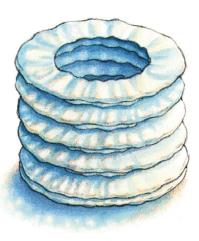

3MTM High Flow series filter systems are designed using state-of-the-art technology, optimizing both performance and effluent quality to ensure customer satisfaction. The elements use a pleat design that results in a high usable filtering surface area per filter.

Radial Pleat Design

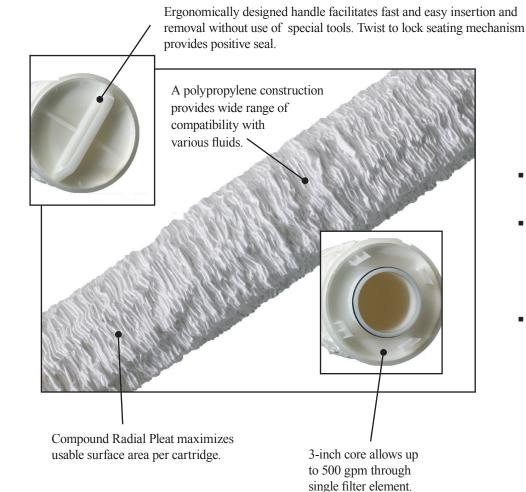

3M innovation is at the heart of the 3M High Flow series filter system. A compound radial pleat design maximizes the usable surface area per filter. Blown microfiber forms the basis of the filter media, which is made to tightly controlled fiber diameter specifications to produce a media with absolute rated particle retention characteristics. Our manufacturing process embosses the media to produce a more uniform pleat pattern, which, in turn, allows greater utilization of the media by evenly distributing the fluid throughout the entire filter structure. This results in consistent particle retention in a compact, space-saving design.

Design Features

The 3M High Flow filter High Flow Filter contains several features to combine high performance with easy operation.

Compound Radial Pleat design maximizes usable media surface area

- A large diameter core allows up to 500 gpm through a single filter element.
- An ergonomically designed handle has been designed to facilitate fast and easy insertion and removal without the use of special tools. Cartridges are simply inserted over a built-in guide tube.
- The seating mechanism uses a "twist to lock" design to provide a positive seal.

Filter Comparison

Consider the following benefits of the 3MTM High Flow series filter system over competitive 2.5" cartridges in a 350 gpm (1325 lpm) and a 2000 gpm (7571 lpm) system*:

Figure 1. - Typical Cartridges Required & Housing Footprint Comparison

350 GPM System (1325 LPM)

Competitive 2.5" Pleated 2.5" Pleated Cartridges

3M™ High Flow Series Filter System

1 Cartridge in a 8.6" Diameter Housing

1 Competitive 2.5" Depth Cartridges in a 14" Diameter Housing

1 Cartridge in a 18 Cartridges in a 16" Diameter Housing

- The 3M High Flow series filter system requires 90% fewer cartridges as competitive 2.5" cartridge systems for a given flow rate.
- 3M High Flow series filter housings are 33% to 50% smaller than competitively sized housings for a given flow rate.
- Fewer filters and a user-friendly housing design means faster change-outs than competitively sized systems.

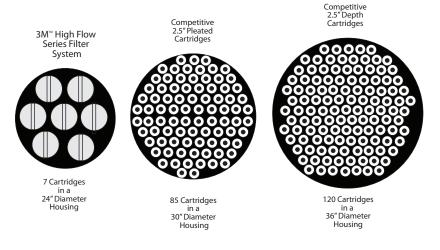

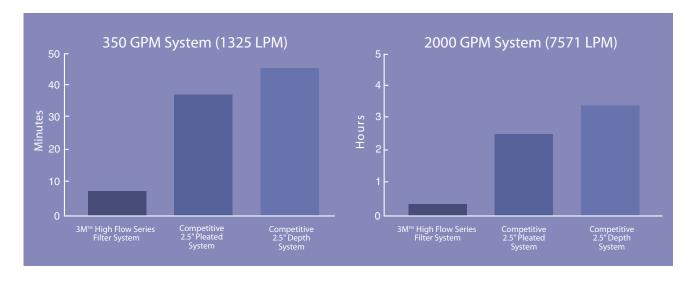

Figure 2. - Typical Time/Labor for Change-Out

3M[™] High Flow Series Filter System Specifications and Operating Parameters

Materials of Construction

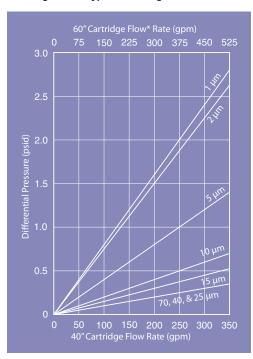

Filter Media - Each grade of the 3MTM High Flow series filter system is manufactured from meltblown FDA compliant polypropylene microfiber media, providing high particle reduction efficiency with broad chemical compatibility. No adhesives, binders, or silicone are used in the manufacturing process. The raw materials composing these filters are FDA compliant according to CFR Title 21. All support layers and hardware are constructed with polypropylene.

O-rings - are available in a variety of materials to suit your applications, including the standard nitrile, Ethylene Propylene Rubber (EPR), silicone, and fluorocarbon.

3M [™] High Flow Series Filter Element Specifications								
	Elements							
Parameter	40" High 60" High							
Removal Ratings (microns)	1, 2, 5, 10, 15, 25, 40, and 70							
Flow vs. Differential Pressure	See Figure 3							
Filter Diameter (inches/cm)	6.5 / 16.5

The thermal and chemical resistance data presented in this brochure is for guidance only. Factors such as duration of exposure, fluid concentration, and temperature should also be considered. Thermal and chemical resistance should also be considered when choosing all materials exposed to fluids.

3M[™] High Flow Series Filter Housings

The 3MTM High Flow series filter housings are specifically designed to deliver all of the system's benefits in a compact footprint. Housings are available in standard designs, as well as customizable configurations to suit your specific needs. All standard 3M High Flow series filter housings are designed, manufactured, tested, and code stamped in accordance with ASME Section VIII, Division 1. Stainless steel housing external surfaces are glassbead blasted for a consistent, easy care finish, while carbon steel units are painted.

3M Purification Inc. MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Since a variety of factors can affect the use and performance of a 3M Purification Inc. product in a particular application, some of which are uniquely within the user's knowledge and control, user is responsible for determining whether or not the 3M Purification Inc. product is fit for a particular purpose and suitable for user's method of application.

Limitation of Remedies and Liability

If the 3M Purification Inc. product is proved to be defective, THE EXCLUSIVE REMEDY, AT 3M Purification Inc.'S OPTION, SHALL BE TO REFUND THE PURCHASE PRICE OR TO REPAIR OR REPLACE THE DEFECTIVE PRODUCT. 3M Purification Inc. shall not otherwise be liable for loss or damages, whether direct, indirect, special, incidental or consequential, regardless of the legal theory asserted, including, but not limited to, contract, negligence, warranty or strict liability.

Warranty

Seller warrants its equipment against defects in workmanship and material for a period of 12 months from date of shipment from the factory under normal use and service and otherwise when such equipment is used in accordance with instructions furnished by Seller and for purposes disclosed in writing at the time of purchase, if any. Any unauthorized alteration of modification of the equipment by Buyer will void this warranty. Seller's liability under this warranty shall be limited to the replacement or repair, F.O.B., point of manufacture, of any defective equipment or part which, having been returned to the factory, transportation charges prepaid, has been inspected and determined by Seller to be defective. THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, EITHER EXPRESSED OR IMPLIED, AS TO DESCRIPTION, QUALITY, MERCHANTABILITY, FITNESS FOR ANY PARTICULAR PURPOSE OR USE, OR ANY OTHER MATTER. Under no circumstances shall Seller be liable to Buyer or any third party for any loss of profits or other direct or indirect costs, expenses, losses or consequential damages arising out of or as a result of any defects in or failure of its products or any part or parts thereof or arising out of or as a result of parts or components incorporated in Seller's equipment but not supplied by the Seller.
