

Enzyme	Туре	Activity	Dosage	
PECTINASES FOR MUST CLARIFICATION				
Endozym Active	Granular pectinase enzyme	To break down pectins before must settling or flotation	20-40 grams per ton of grape	
Endozym Flotation	Liquid pectinase enzyme for must clarification through flotation or cold settling	Fast acting, it promotes the hydrolysis of the pectins and the separation of juice from the pomace	5-10 ml per ton of grapes (5.75 - 11.5 grams per ton)	
Endozym Ice	Extra rapid liquid pectinase enzyme	Very fast de-pectinization that also prevents the inhibition of limiting factors like cold, low pH or SO2	2-6 ml per ton of grapes (about 2.3- 6.9 grams per ton)	
Endozym ICS 10 Éclair	High concentration liquid pectinase enzyme	The higher concentration guarantees a longer shelf life & makes the package very easy to store in a small, refrigerated space.	1.5 to 5 ml per ton of grapes (about 1.7-5.75 grams/ton)	
Endozym Micro	Liquid pectinase enzyme	Promotes the hydrolysis of the pectins and the separation of juice from the pomace, resulting in an increase of free-run juice yield	2-6 ml per ton of grapes (about 2.3- 6.9 ml per ton)	
Endozym Muscat	Granular pectinase for "harder to clarify" varietals	Arabanase and rhamnosidase are key ingredients that allow Endozym Muscat to quickly de-pectinize the most challenging varietals	20-40 grams per ton of grape	
Aromatic cold maceration enzymes				
Endozym Cultivar	Granular enzyme for cold maceration of white grapes	Used at the press or added to the must going to the cold maceration tank. It weakens the cell walls in the pulp facilitating aromas extraction	20-40 grams per ton of grapes	
COLOR ENZYMES				
Endozym Contact Pelliculaire	Granular maceration/col- or-extraction enzyme	Facilitates the dissolution of anthocyanins and improves tannin extraction from skins	20-40 grams per ton of grapes	
Endozym ICS 10 Rouge	Liquid maceration-color extraction concentrated enzyme	Allows must to penetrate the cellular walls, enabling rapid color and phenolic extraction	1 to 3 ml per ton of grapes (1.15-3.45 grams/ton)	
NEW! Endozym Rouge deep skin	To extract color and mini- mize lees in varieties with thicker skin	Reduces maceration times and the need for excessive pump overs.	10 ml per ton of grapes	
NEW! Endozym Rouge light skin	To extract color and mini- mize lees in varieties with thinner skin	Allows to maximise the concentration of polyphenols and varietal aromas of varietalswith thinner skins	10 ml per ton of grapes	

Enzyme	Түре	ACTIVITY	Dosage	
Aroma and glucanase enzymes				
Endozym Antibotrytis	Mix of various activities including glucanase to reduce impact of Botrytis cinerea and mold in general	Reduces the PPO laccase released from botrytis and responsabile for molded wine oxidation. Also reduc- es excessive glucans.	30-50 grams per ton of grapes or 20-40 grams per hl of wine (1.5-3 lbs./1, 000gallons)	
Endozym ß-Split	Granulated Beta-Gluco- sidase specific for aroma extraction	Beta-Glucosidase for aroma enhancement	2- 5 grams per HI or 20-50 ppm	
Endozym Thiol	Liquid carbon-sulfur lyase	It favors the hydrolysis of the thiols precursors and enhances their expression in the wine	20-40 ml (23-46 g) per ton of grape, or 20-40 ppm on must	
Endozym Glucapec	Glucanase/Pectinase	To facilitate filterability in wines rich in glucans and to extract polysaccharides from lees	2 to 4 g/hl or 20-40 ppm or 1/3 lb/1,000 gllons	
Flash-Détente technology and Thermo				
Endozym TMO	Pool of enzymatic activities	For the clarification of heat extracted musts.	20-40 ppm	
Apple enzymes				
Endozym Alphamyl FJ	∂-amylase enzyme for the clarification of cider and perry	To avoid possible starch related haze and to facili- tate ultra filtration	2-6 ml/100Kg of apples at 45-50°C. Contact time 60 minutes. If heat isn't avail- able, use 20ml/100Kg and double the contact time	
Endozym Pectofruit PR:	Cellulase for increasing yield and help clarification of cider and perry	Insures total degradation of the fruit structure before pressing	30 ml/100Kg of apples at °C. If heat isn't available use 70 ml/100Kg
