ZYMAFLORE® F83

Saccharomyces cerevisiae yeast for Mediterranean red grape varieties.

Selected non-GMO Active Dry Yeast (ADY) for use in winemaking. Qualified for the elaboration of products for direct human consumption in the field of the regulated use in Oenology. In accordance with the current EU regulation n° 2019/934.

SPECIFICATIONS AND OENOLOGICAL PROPERTIES

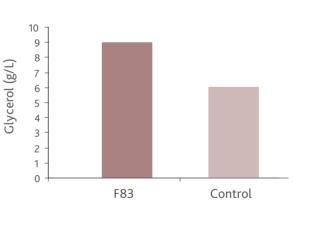

Strain isolated in Italy by the University of Florence (Tuscany) for vinification of Mediterranean-type red grape varieties, particularly Sangiovese, Premium to Super Premium. A high glycerol producer, ZYMAFLORE® F83 has been selected for its ability to produce fruity, round, supple wines for early release on the market. Due to its short lag phase and easy implementation, ZYMAFLORE® F83 guarantees efficient and complete fermentations.

FERMENTATION CHARACTERISTICS:

- Alcohol tolerance: up to 16.5% vol.
- Tolerance over a large temperature range: 20 30°C High glycerol production. (68 - 86°F).
- · Low nitrogen requirements.
- · Very good fermentation kinetics.
- Low production of volatile acidity, H₂S and acetaldehyde.

EXPERIMENTAL RESULTS

Sangiovese, Montepulciano. Analyses carried out at running off.

PHYSICAL CHARACTERISTICS

Dehydrated yeast (vacuum-packed).

Aspect Granular

- High production of red fruit type aromas.

EC - 10.12.19 - The information shown above reflects the current state of our knowledge. It is given without commitment or guarantee since the conditions of use are beyond our control. It does not

CHEMICAL AND MICROBIOLOGICAL ANALYSIS

Humidity (%)< 8
Viable SADY cells (CFU/g) $\ge 2.10^{10}$
Lactic acid bacteria (CFU/g)< 10 ⁵
Acetic acid bacteria (CFU/g)< 10 ⁴
Yeasts of a genus other than Saccharomyces (CFU/g) < 10^{5}
Yeasts of a different species or strain (%) < 5
Coliforms (CFU/g)< 10 ²
E. coli (/g)None

Staphylococcus (/g)	None
Salmonella (/25 g)	None
Moulds (CFU/g)	< 10 ³
Lead (ppm)	< 2
Arsenic (ppm)	< 3
Mercury (ppm)	< 1
Cadmium (ppm)	< 1

PROTOCOL FOR USE

OENOLOGICAL CONDITIONS

- Inoculate with the yeast as soon as possible post rehydration.
- Respect the prescribed dose to ensure a good yeast implantation, even in case of abundance of indigenous yeasts.
- Temperature, yeast strain, rehydration and winery hygiene are also essential for successful implantation.

DOSAGE

• 15 - 30 g/hL (150 - 300 ppm).

In the case of prefermentative cold maceration (cold soaking), it is recommended to add yeast at 5 g/hL (50 ppm) during tank filling, in order to dominate the indigenous flora, then to complete with 15 to 20 g/hL (150 - 200 ppm) at the end of maceration, before increasing the must temperature.

IMPLEMENTATION

- Carefully follow the yeast rehydration protocol indicated on the packet.
- Avoid temperature differences exceeding 10°C (18°F) between the must and the yeast during inoculation. Total yeast preparation time must not exceed 45 minutes.
- In the case of potentially high alcohol concentrations and in order to minimise volatile acidity formation, use **DYNASTART®/ SUPERSTART® ROUGE**.

STORAGE RECOMMENDATION

- Store above ground level in a dry area not liable to impart odours. Ensuring stock is kept at a moderate temperature, in its original, unopened packaging.
- Optimal date of use: 4 years.

PACKAGING

500 g vacuum bag. 10 kg box.
